

# ReactJs with Pre-requisites - Syllabus

Sl. no	Topic	Hrs
1	Module 1: Web Development	
2	Module 2: Html, Css, Bootstrap	
3	Module 3: Javascript, EcmaScript	
4	Module 4: ReactJs	
1	Module 1: Web Development	
	What is Web Development, What is Mern Stack	
	Github	
2	Module 2: Html, Css and Bootstrap	
	Html	
	Introduction to Html	
	Html Elements, Attributes	
	Page Creation with Formatting Elements	
	Creating Links and Navigating, Redirecting Pages	
	Displaying the Images, Adjustment of Images along with Content	
	Organizing data with Tables	
	Displaying data in Listings	
	Creating Forms and Layouts with Fields and Input	
	Implementing the Semantic Elements (latest Html elements)	
	Working with Audio and Video (Media Objects)	
	Css	

	Introduction to Css	
	Implementing the Three Different ways of Styles: Inline, Embedded and External to Html Content	
	Applying the Web Colors to Html Content in Three Different ways: Direct Name, Numerical, and HexaDecimal	
	Applying different properties like: padding, margin, float, font, border, background, etc.,	
	Applying the Display and Position properties, etc.,	
	Creating the Web Page with Content	
	Creating the Grid Layout with Sample Content with Responsive	
	Working with Media Queries	
	<b>Bootstrap</b>	
	Introduction to Bootstrap, Usage, Advantages	
	Discussing about different types of Resolutions	
	Implementing the Bootstrap Required Links into Web Pages	
	Create the Fixed Width, Fluid Width Web Pages	
	Implementing the Components of Bootstrap:	
	Tables, Lists, Forms, Images,	
	Modals, Tabs, Cards, Navigations	
<b>3</b>	<b>Module 3: Javascript and EcmaScript</b>	
	<b>Javascript</b>	
	Introduction about Javascript, DOM etc?	
	Writing the Programs and Displaying the Data	
	Understanding about Keywords, Identifiers	
	Declarations: var, let, const	

	Implementing Statements: Decision Making Statements and Loop Statements	
	Working with Arrays and Implementing with Examples	
	Understanding the Concept of Functions: Call and Define, Functions with Parameters, Return Statement, Arrow Functions, Call Back Functions	
	Implementing the Object Oriented Programming in Javascript: What is Object, Class, Constructor, Method, Property etc., and its terminology	
	Creating the concept with Class and Object includes the Methods, Properties, and Accessing the Data	
	Proptotype, Closures concepts implementation	
	Promise, and Async and Await concepts implementation	
	<b>Ecmascript</b>	
	Ecmascript Introduction	
	Declarations of Identifiers with let & const	
	Working with Loops	
	Functions, Passing Parameters, Return Statement, Arrow Functions, Call Back Functions	
	Spread Operators	
	Map Object with Set and Get	
	Promise, Async and Await with Promise	
<b>4</b>	<b>ReactJS</b>	
	ReactJS Introduction	
	Scope of ReactJS	

	What is ReactJS?	
	Understanding the Terminology of ReactJS	
	What is Single Page Application?	
	Understanding the ReactJS Architecture	
	Setting up the ReactJS Environment	
	Creating the First Project in ReactJS	
	Understanding the Project Folder & Files Structure	
	Working with assets - Html, Css, Images, Javascripts in ReactJS	
	Understanding the Term: Component.	
	What is Component?	
	Creating the new Component(s)	
	Accessing the Created Component(s)	
	Working with Re-Usable Component(s)	
	Understanding the Terms: 'props' and 'state'	
	Working with 'props'	
	Implementing the 'props' into Component(s)	
	Creating the 'state' object, setting the 'properties' into it	
	Accessing the 'properties' from 'state' object into Components	
	Working with Event Handlers ex., onClick, onHover, onBlur, onFocus, onChange etc.,	
	Creating the methods into Component(s)	
	Writing the definition(s) of the methods	
	Passing 'parameters' into methods	
	Understanding the concept of Property Binding	
	Two types of Property Binding., 1. One Way Property Binding and 2. Two Way Property Binding	
	Asking the User to input the value, accessing those value(s)	

	Creating the group of Component(s) and accessing those through 'state' object	
	Creating the CRUD operations	
	Understanding the concept of Routing	
	Creating the group of Component(s) and aligning them into Routing	
	Fetching the Data from RESTAPI into Component(s) and accessing the Data	
	Understanding and Working with Material UI (ReactJS UI Framework)	
	Creating the Button, Radio, Form, Table etc.,	
	Working with Form, Two – Way Property Binding	
	Creating the Validation with Error Hints,	
	Applying the Regular Expressions to Input Fields	
	Working with the concept of Observables	
	Working with the concept of Services	
	Implementing the concept of Observables & Subscribe with Services	
	Implementing the concept of Observables & Subscribe with Services using RESTAPI	
	Understanding the Terms: babel, webpack	
	Understanding the concept of Redux	
	Understanding the Terms: Component, Action, Reducer, Data Store	
	Understanding and Implementing the concept of Redux	
	Understanding the Term: Sage	
	Implementing the functionality of Redux with Saga	

	Understanding the Terms: Life Cycle Hooks	
	What is the usage of Life Cycle Hooks	
	How many types of Life Cycle Hooks: 1. Class Based Life Cycle Hooks and 2. Functional Based Life Cycle Hooks	
	Understanding the Class Based Life Cycle Hooks and its methods: componentDidMount(), componentDidUpdate(), componentWillUnmount() etc.,	
	Understanding the Functional Based Life Cycle Hooks and its methods: useState(), useEffect(), useContext(), etc.,	
	Understanding the concept of Styled Components	
	Working with ReactJS Developer Tools	
	Implementing the concept of ContextAPI	
	Understand and Implementing the Unit Tests in ReactJS	
	Creating the Single Page Application in ReactJS
